

MP3 Player as Flash Drive

Written By: Jonah Snead

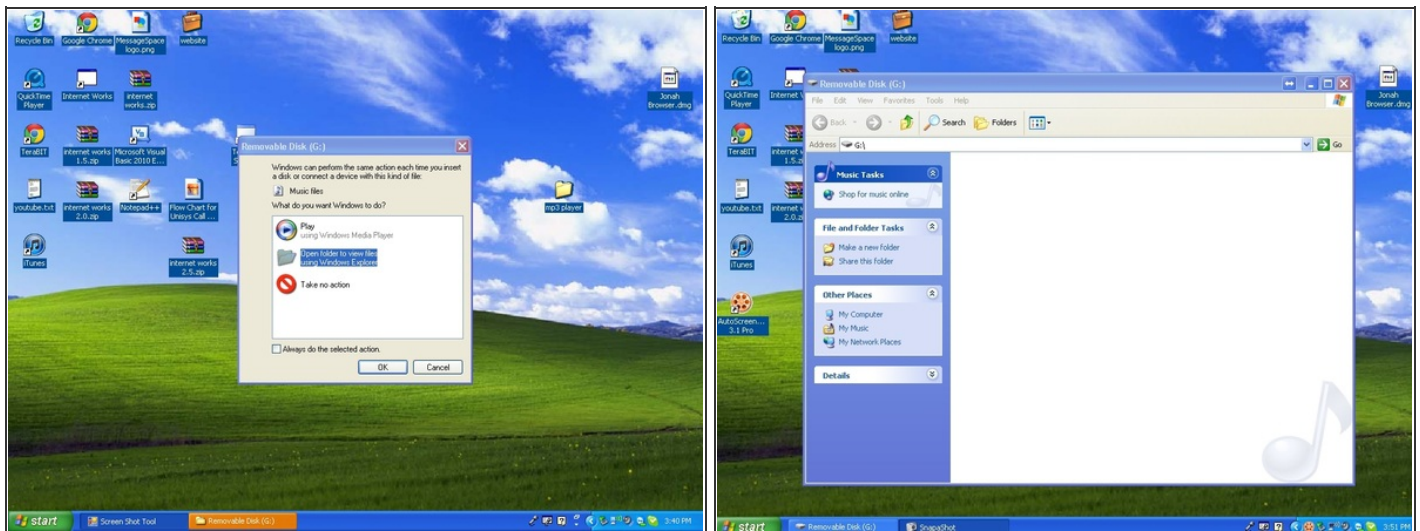

PARTS:

- [MP3 Player \(1\)](#)
- [USB cable \(1\)](#)
- [Computer running Windows XP, Vista, or Mac OS X \(1\)](#)
- [Files for MP3 Player \(1\)](#)

SUMMARY

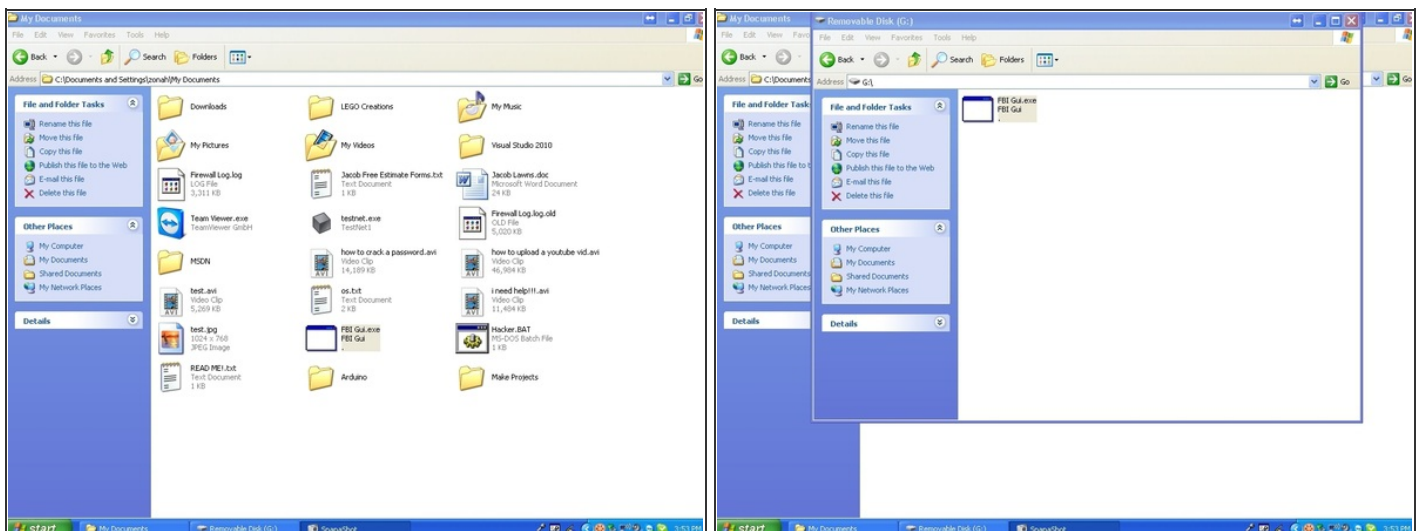

Have you ever wanted to put un-music files on an MP3 player? Well, I'll show you how today.

Step 1 — MP3 Player as Flash Drive

- First, make sure your computer treats your MP3 player as a flash drive by plugging it in.
- When **Autoplay** pops up, click on **Open Folder To View Files**. Check to make sure that the MP3 player has a drive letter assigned (Figure B.)

Step 2

- Now find the file you want to put on your MP3 player. (Figure A.) Then copy and paste the file to the MP3 player. (Figure B.)
- You are done! To view files on another computer, just plug it in on that computer.
- Troubleshooting: Autoplay won't start? What happened? Just go to **My Computer** and look for the MP3 player there.

It's easy to make an MP3 player hold un-music files.
